ARAB STATES - ISRAEL: Transfers of Libyan and Iraqi ground-attack aircraft to Egypt have improved Cairo's capability to attack Israeli targets, but Israel's military superiority is not threatened.

About 30 Libyan Mirages—probably Mirage 5s—and some 16 Iraqi Hunter aircraft were transferred to Egypt last month. The Mirage 5 is superior to all other ground-attack aircraft in the Egyptian inventory, including the SU-7 Fitter A, the swing-wing SU-17 Fitter B, and the MIG-17 Fresco.

Both the Mirage and the two Fitter variants can reach targets in Israel proper, but only the Mirage can fly at the low altitudes required to penetrate Israeli defenses and still reach Israel with an adequate payload.

The Libyan Mirages are believed to be flown by Egyptians.

The Hunters, which have about twice the payload capability of the MIG-17, would be useful in ground-attack missions close to the Suez Canal. In such a role, they would complement Egyptian use of MIG-17s, MIG-21 interceptors configured for a strike role, as well as the Mirages and Fitters.

(continued)
The aircraft add only slightly to the numerical superiority in aircraft already held by the Arabs. The new aircraft, however, could make it more difficult for Israel to defend against air attacks, particularly if Egypt and Syria launched a coordinated strike.
